

# Consultation Report - Test

Generated 2026-10-10

## Summary

Your recent health readings show that your systolic blood pressure (152), diastolic blood pressure (98), blood glucose (8.2), and heart rate (104) have all increased since your last records and are classified as worsened. These metrics have been flagged because they have each moved further from typical reference ranges and have risen for three consecutive readings. Specifically, your blood pressure rose from 134/86 to 152/98, your blood glucose increased from 6.3 to 8.2, and your heart rate rose from 88 to 104. Please discuss these findings and trends with a qualified healthcare professional.

## Notable changes over time

- Heart Rate: 104 bpm (Your heart rate has increased from 88 to 104 since your last record (worsened - moved further from the typical reference range).)
- Systolic Blood Pressure: 152 mmHg (Your systolic blood pressure has increased from 134 to 152 since your last record (worsened - moved further from the typical reference range).)
- Diastolic Blood Pressure: 98 mmHg (Your diastolic blood pressure has increased from 86 to 98 since your last record (worsened - moved further from the typical reference range).)
- Blood Glucose: 8.2 mmol/L (Your blood glucose has increased from 6.3 to 8.2 since your last record (worsened - moved further from the typical reference range).)

## In plain language

- Trends are based only on the records provided and are not a diagnosis. Please confirm with your doctor.

## Questions to ask your doctor

- Are the upward trends in Heart Rate, Systolic Blood Pressure, Diastolic Blood Pressure, Blood Glucose something I should act on?
